

JAIDEEP PONNAM

SOFTWARE DEVELOPER | ENTERPRISE & CLOUD ARCHITECTURE

Atlanta, GA | 901-542-8284 | jaideepponnam@gmail.com

SUMMARY

Software Engineer with experience building scalable backend systems, RESTful APIs, and distributed microservice applications using Java, Spring Boot, Node.js, and TypeScript. Skilled in cloud-native architecture, event-driven systems, Docker-based containerization, CI/CD pipelines, and enterprise platform engineering. Experience developing AI-powered backend workflows, orchestration pipelines, and observable services using OpenTelemetry and SigNoz. Passionate about GenAI platforms, distributed systems, and modern cloud technologies.

EDUCATION

University of Memphis

Master’s, Computer Science

Jan 2024 – May 2025

WORK EXPERIENCE

Greenlight

Software Engineer (Java & Backend Systems)

Jul 2025

Atlanta, Georgia, USA

- Developed backend services using Java and Spring Boot to support scalable microservice-based applications used across enterprise platforms.
- Designed and implemented scalable RESTful APIs within distributed microservice environments for enterprise platform communication.
- Integrated backend services with PostgreSQL databases and improved query performance through optimized data models.
- Built and maintained CI/CD pipelines using Docker and Azure DevOps to automate application testing and deployments.
- Wrote unit tests with JUnit and participated in code reviews to maintain high code quality and reliability.
- Worked closely with QA engineers, DevOps teams, and product managers in Agile sprints to deliver new features and system improvements.
- Contributed to system design discussions, sprint planning, and technical documentation to support development and team collaboration.

University of Memphis

Research Assistant (Java Developer)

Aug 2024 - May 2025

Memphis, Tennessee, USA

- Developed backend components and internal tools using Java and Spring Boot to support research projects and academic data workflows.
- Assisted in designing data models and reporting scripts to help organize and analyze research datasets, improving data accessibility and supporting more efficient analysis for research projects.
- Implemented unit tests using JUnit and Jasmine to validate application functionality and improve code reliability.
- Explored AI-based approaches to automate parts of data processing and research analysis tasks.
- Maintained technical documentation and assisted in preparing system guidelines for research team members.
- Collaborated with faculty and graduate students to support development and improvement of research software tools.

DXC Technology

Software Engineer

Nov 2021 - Dec 2023

Karnataka, India

- Developed and maintained scalable backend services using Java and Spring Boot within microservice-based enterprise applications.
- Developed and used RESTful APIs supported by JSON and HTTP protocols for backend and internal web platform integration.
- Constructed and improved SQL queries and schemas of the relational database, for improved data retrieval and sustained high-volume transactions.
- Tested and resolved issues within production and staging environments for improved systems and reduced application downtime.
- Created unit and integration tests with JUnit, resulting in higher code reliability and reduced defects in development cycles.
- Partnered with the DevOps team in support of CI/CD integration for automated builds and deployments through Git, Jenkins, and containerized environments.
- Extension of Agile development practices in sprint planning, backlog grooming, and daily sit to facilitate incremental backend feature delivery.

- Created backend modules in Java to develop and implement backend processing and analytics modules for structured research datasets in accordance with the client-server architecture.
- Built and tested RESTful APIs based on the JSON and HTTP standard for the research applications.
- Designed and optimized the SQL queries for the experimental datasets to facilitate backend data retrieval and to enhance the data processing performance.
- Streamlined research data processing and workflows through automation by employing Java and Python, thus decreasing the manual effort required by the teams.
- Used Git version control and collaborated with other engineers to debug, test, and maintain the backend tools in a Linux development environment.
- Part of the team that wrote and contributed to the technical documentation and established the guidelines that govern Back End development and API.

TECHNICAL SKILLS

- **Programming Languages:** Java, TypeScript, JavaScript (ES6+), Python, C#, Go
- **Frontend:** React.js, Angular, Material UI, CSS, Responsive UI Design
- **Backend:** Spring Boot, Node.js, NestJS, Express.js, REST APIs, Event-Driven Architecture, Kafka, Microservices, Distributed Systems, API-First Design, Spring Data, Spring Batch, J2EE, SOAP Web Services, JMS, JDBC, Transactions
- **Databases:** PostgreSQL, MongoDB, CosmosDB, SQL Server, Oracle, Redis
- **Cloud & DevOps:** Azure DevOps, Docker, Kubernetes, Jenkins, CI/CD Pipelines, Linux, AWS, GCP, Monitoring & Observability
- **Tools & Frameworks:** Git, GitHub, Maven, OpenShift, Postman, JIRA, YAML, XML, Artifactory, OpenTelemetry, SigNoz
- **Testing:** JUnit, Selenium, Jasmine, Test-Driven Development (TDD)
- **Architecture:** Cloud-Native Architecture, Microservices, Distributed Systems, Service-Oriented Architecture (SOA)
- **Security:** OAuth2.0, SAML2.0
- **Methodologies:** Agile (Scrum), SDLC

TECHNICAL LEADERSHIP

Software Development Club University of Memphis	Spring 2025
Technical Workshop Lead	Memphis, Tennessee, USA
• Organized and facilitated coding workshops covering programming fundamentals and cloud-based development tools. • Collaborated with faculty and student leaders to deliver hands-on learning sessions that encouraged technical skill development among students.
